## Windows 7 and DVB-T USB stick CE9500B1 or CE6230

Posted by Ralph - 2010/01/16 10:16

---

USB DVB-T tuner with CE9500B1 or CE6230 chipset.  
( Registry instance : USB\VID\_8086&PID\_9500 )

Here is a driver that works under Windows 7 (32b) .

When you plug in the stick it announces itself as CE9500B1, but cannot find any compatible driver, either from Internet and from Windows Update.

Once Win7 has announced the failure of any driver installation, go to the Control Panel, hardware Manager.  
You will find a CE9500B1 instance in the device list.

Right click on that device (with a yellow exclamation mark) and click on Update driver.

Select "Find the driver locally" and browse to the directory where you have unzipped the attached driver file.

Click OK and the driver should install OK. (You will have to confirm that you want to install that uncertified driver)

Please note that there is a problem with the Windows 7 Media Center software.

The RF sensitivity is very poor although it's OK with the Blaze DTV software.

Hope this will be useful. [http://www.avi-plus.com/images/fbfiles/files/USB\\_DVB\\_T\\_STICK\\_CE9500B1\\_VE6230.zip](http://www.avi-plus.com/images/fbfiles/files/USB_DVB_T_STICK_CE9500B1_VE6230.zip)
